Report of School Board.

There have been thirty-five terms taught in town during the school year. The past year in some respects has been one of progress. There has been more uniformity in method and rather better discipline in most schools than in former years. Among most of our teachers there has been an increasing desire to secure the best means to attain the end in view—the development of the pupil's mind.

One of the highest achievements of the teacher is gained when he has secured the attention of the pupil and led him to think for himself.

HISTORY.

During this year "Ellis' History" has been introduced.

There has not been as much interest manifested in this branch as we hoped to see. The book is clear, concise, brief, accurate and up to date and we think a good book for beginners. We believe that collateral reading should be encouraged in this branch of study as it broadens the student's ideas regarding past events and renders him able to judge of the events from various standpoints.

GEOGRAPHY.

We consider this a very important branch and usually very poorly taught. Few of our teachers are up to date in their methods of teaching this branch. There is scarcely any thing taught the pupil which he forgets so quickly. Why? Because it is not presented logically.

The child's mind cannot readily grasp the mathematical portion but very readily can understand something about the earth, water and air, all of which he is constantly observing. Geography is the most concrete of the sciences and therefore the most real, and appeals most strongly to the child's mind. One of the great objects of the study of Geography is to lead the mind of the pupil into acquaintance with the laws of nature rather than teaching him certain facts.

PHYSICAL CULTURE.

Two or more schools have had regular exercises in Calisthenics with dumb balls a part of the year. The effect on some pupils has been marked. It transforms the round shouldered, shuffle gaited, awkward boy, into a erect selfcontrolled and graceful youth. It also gives vigor to the mental faculties. We believe that every Teacher should be competent to train scholars in the Ling System or some other. When some systematic physical training is adopted and enforced in our schools, round shoulders and pigen breasts will be avoided or remedied.

VISIT OF PARENTS.

We are glad to report a very much larger number of visits by parents and citizens during the year than in former years.

There has been 296 visits made during this year.

By this means, Parents and Guardians, are brought in touch with the Teacher and Scholar, and are made to feel that their work is being carefully scrutinized. We hope that in the coming year parents will cooperate with teacher and scholar by frequent visitation of the schools.

THIRTY WEEKS SCHOOL NEEDED.

In closing we wish to impress on all our citizens the necessity of a generous support of our Schools as there the foundation for future usefulness of the next generation is laid. To slight the foundation is to weaken the superstructure.

We beleive we ought to have thirty weeks per year in every school, and that the improvement in our schools would far more than compensate the extra taxation needed for this purpose.
